User Manual Commands

getDate

- Description: Returns the full date back to the user in decimal form.

getTime

- Description: Retrieves and returns the time values for hours, minutes, and seconds from the clock register. This is in 24 Hour time.

help

- Description: If Help is typed alone, it prints a list of other commands able to be called. If Help is followed by another command, there is helpful information about that command.

setDate

- Description: Sets the date register to the new values that the user inputted
- Syntax: All values must be inputted as setDate-Day-Month-Millennium-Year
 - Note: You must input each parameter as two digits.
 - Example: For January you should input, "01"
- Example: For December 14, 1990 you should input, "setDate-14-12-19-90"

setTime

- Description: Sets the time register to the new values that the user inputted. This is in 24 Hour time.
- Syntax: All values must be inputted as setTime-Hours-Minutes-Seconds
- Note: You must input each parameter as two digits.
 - Example: For hour 6 you should input, "06"
- Example: For 6:35:51PM you should input, "setTime-18-35-51"

shutdown

- Description: Turns the terminal off

version

- Description: Returns the version of the operating system
