User Manual Commands

getDate
- ● <u>Description:</u> Returns the full date back to the user in decimal form.

getTime
- ● <u>Description:</u> Retrieves and returns the time values for hours, minutes, and seconds form the clock register. This is in 24 Hour time.

help
- ● <u>Description:</u> If Help is typed alone, it prints a list of other commands able to be called. If Help is followed by another command, there is helpful information about that command.
- ● <u>Example:</u> For help with setTime, "help-setTime"

setDate
- ● <u>Description:</u> Sets the date register to the new values that the user inputed
- ● <u>Syntax:</u> All values must be inputted as setDate-Day-Month-Millennium-Year
- ● <u>Example:</u> For December 14, 1990 you should input, "setDate-14-12-19-90"

setTime
- ● <u>Description:</u> Sets the time register to the new values that the user inputed. This is in 24 Hour time.
- ● <u>Syntax:</u> All values must be inputted as setTime-Hours-Minutes-Seconds
- ● <u>Example:</u> For 6:35:51PM you should input, "setTime-18-35-51"

shutdown
- ● <u>Description:</u> Turns the terminal off

version
- ● <u>Description:</u> Returns the version of the operating system
